

# **SPRINT SHUTTLE**

**BRIAN JAMES TRAILERS**

Aerodynamic performance, quality fully enclosed transporter.

Adapting to your needs.

Discretely secure transport for small to mid-size sports or race cars.  
 A high quality uni-body in GRP provides rigid structure and combines with the aerodynamic shape to deliver easy towing performance.

# SPRINT SHUTTLE

Loading is conducted using the rear ramp doors (optionally in combination with a hydraulic tilt-bed facility providing an ultra-low loading angle). Each door is individually locked for travel.

A personnel access door in the front section enables restraint equipment to easily be attached. Numerous chassis attachment points are provided.

Body construction techniques pioneered by Brian James Trailers over a decade ago enable this high level of performance without severe weight penalty.

Sprint Shuttle trailers have been in service successfully for many years. Owners enjoy the space, security and convenience of the fully enclosed trailer.

## Technical specification

Gross trailer capacity	2,000 kg
Load capacity	1,300 kg
Internal bed length	4.26 m (14ft)
Internal bed width	1.85 m (6ft 1)
Internal height (max)	1.82 m (6ft)
Vehicle height (max)	1.67 m (5ft 6)
Overall length	5.53 m (18ft 2)
Overall width	2.3 m (7ft 6)
